Abstract

This document describes the MOG 2010 style. Please use it as a template to write your paper.

Keywords: Here you can place your own keywords

1 INTRODUCTION

This document contains the MOG 2010 style and some instructions for writing the MOG 2010 paper. Please use it as a template to write your paper. Do not forget to remove and/or replace the examples in this template: fill in your own abstract and place your own keywords in the description list just before the introduction. Papers should be 12 pages at most (6 pages for short papers). The paper should contain an abstract of about ten lines, clearly stating the objective of the paper. Please make sure that the research method and background of your work are mentioned in the introduction.

The file *mog.cls* should be placed in the TeX search path. (Placing it in the same directory as the paper should also work.)

1.1 SUBSECTION HEADER

You can use sub-sections, sub-sub-sections and even deeper levels of sections if you want.

1.1.1 SUB-SUB-SECTION

Like this. Please do not use sections deeper than level 3. If this cannot be avoided use unnumbered level 3 section headings with the `\subsubsection*` command.

2 THE BIBLIOGRAPHY STYLE

The style for bibliographic references is `natbib.sty` with `apalike.bst`. If you want to use the `lap` citation style, you can add the class option `lap` (see the example in the sources of this document). In that case `\cite` gives the author name plus the year between braces; `\cite*` gives only the year.

An example of a `natbib`-style reference is Doe (1998). If you want the whole reference between braces, use (Doe, 1998) or (e.g. Doe, 1998). Refer to the `natbib`-documentation for more options.

Please do not make extensive use of footnotes.¹

$$\text{sim}(D, Q) = \sum_{k=1}^t w_{qk} \cdot w_{dk} \quad (1)$$

Equations should be numbered as in this example.

*general acknowledgements

¹If you use footnotes they should look like this.

3 CONCLUSION

Good luck.
